

Osmy Roots: the Vale family

Independent fictional engineering fixture

This is a fictional family packet for testing Osmy Roots. Rowan Vale is the imagined presenter. Every name, place, date and memory in these files was invented for the engineering fixture. The images are generated archive cards with trees and boats; they do not depict real people. No private family record, photograph, source hash or file path is included.

The fictional narrative begins with a promise to preserve a family history. Rowan brings earlier records and a few labelled images to assemble a readable book. The central line runs from Alder Vale to Ellis, Martin, Jonah and Rowan. The full register contains 35 distinct people. Two people happen to share the name Mira Vale, but their stable IDs and relationships keep them separate.

The supplied places are Willowford, Northmere, Harbourfield and Fernbridge. They are invented locations. The ledger records a move for Ellis around 1936; the exact day remains unknown. Alder's birth and death years are approximate. Clara has conflicting reported birth years, and the packet contains no independent certificate that would settle the difference. Probable links near the oldest generation remain candidates.

The relationship register contains 56 distinct links. A separate audit file preserves 57 raw rows and identifies one repeated parent-child edge. The ordinary upload files carry the entire intended roster and its relationships. The staged map should release a five-person branch and then six saved batches, reaching all 35 people without loading a hidden family seed.

Three short chat archives use undated reconstructed dialogue. Their Mom, Dad and Family roles are format labels. They preserve invented evidence roots and source locators, so repeated adaptations cannot count as independent corroboration. One personal recollection remains unaccepted until the model interpretation and the presenter's explicit review. The book should include the current reviewed state, keep uncertainty visible and cite the supplied English source passages. This fixture supports engineering and rehearsal; it is not evidence of a real family's history.
